

I have cash on my Swiss bank account

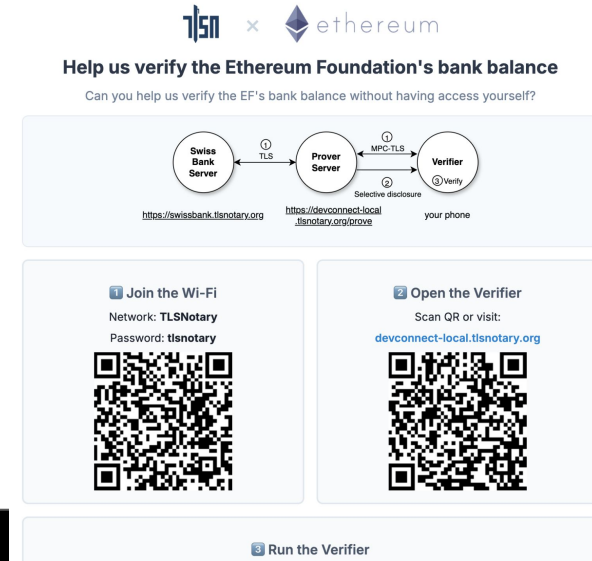

Trust me bro 💀
Here is my password 💀

I'll prove it to you 🔑

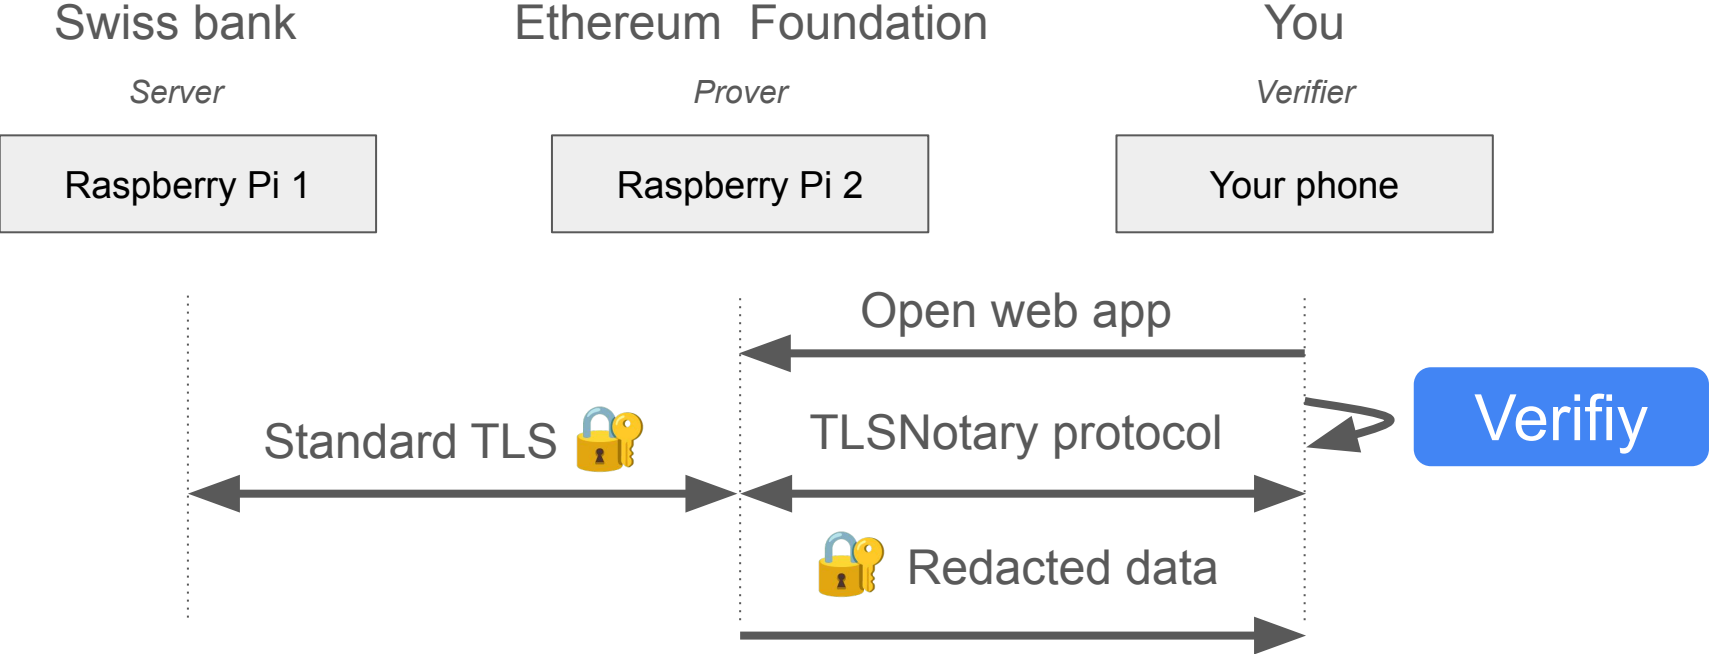

Join the network (1) and open the webapp (2) to verify (3)

Multi Party Protocol

You can't access <https://swissbank.tlsnotary.org/balances>, but you can

Press the bank's button to see the balance information

(like a bank employee)

TLSNotary Swiss Bank Demo

This demo server holds the EF's (fake) cash reserves.
Only the EF has the authentication token to access the data

Bank Reserves

```
{
  "account_id": "ETH-842",
  "accounts": {
    "CHF": "50_000_000",
    "EUR": "275_000_000",
    "USD": "125_000_000"
  },
  "address": {
    "city": "Zürich",
    "country": "Switzerland",
    "postal": "8001",
    "street": "Bahnhofstrasse"
  },
  "bank": "Eidgenössische Kantonalbank",
  "tax": "0.05",
  "vat": "0.00"
}
```

Alt 'S' to reveal details

Live Access Log

Time	Activity
07:47:22	✗ Unauthorized access attempt to /balances from ::ffff:141.134.41.73

	✓ Authorized access to /balances from ::ffff:10.128.2.35

How can I verify this demo is real?

- Check the source code:
https://github.com/tlsnotary/devconnect25_demo
- Read the docs: <https://tlsnotary.org>

Who do I need to trust?

- The bank, to serve correct data and its certificates
- Mathematics and cryptography 🕶️
(No other parties or attestations are involved)
